

## Notice

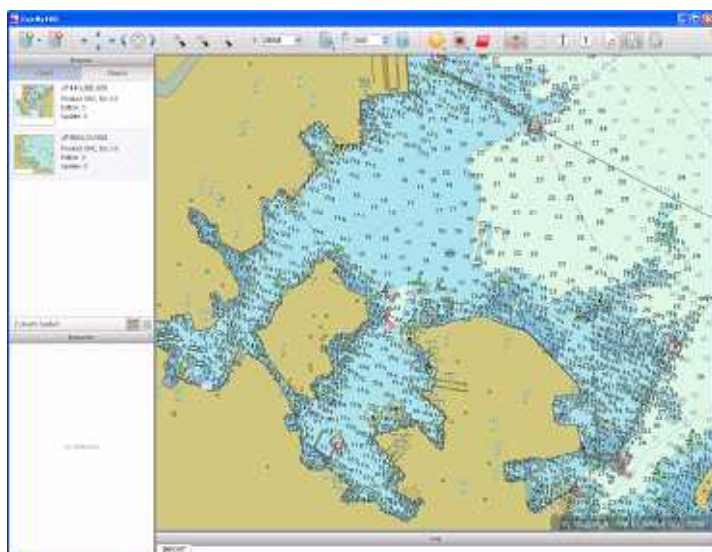

### Improvement on Display Function of Electronic Navigational Charts

Japan Coast Guard will have been improving the display of Japanese Electronic Navigational Charts (ENCs) with populating Scale minimum (SCAMIN) attributes.

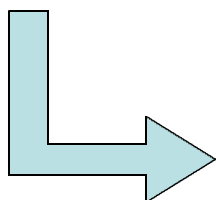

The cluttering of chart symbols and soundings has occurred on the ENC display when reducing. The display will be improved by prioritising the display of objects corresponding with scales, with populating SCAMIN attributes according to the International Standard. (See below)

ENC updates with SCAMIN attributes will be issued sequentially from 29<sup>th</sup> October. ENC users are asked to be aware of that.

An example that the display function of ENCs is improved.

(Without SCAMIN attributes)

(With SCAMIN attributes)
